

### Glasgow – Recycling Yard

Project	JJM2524 - Recycling Yard Surface Treatment	
Location	Glasgow	
Client	Bedrock Plant Hire	
Key works delivered	Surface Treatment - Cement Mixing to Type 1 Layer	
Project Duration	Jan 2021 - 4 weeks	
Stabilised Area	7,000m²	
Earthworks volume	By Client	

#### PROJECT OVERVIEW

Existing Recycling Yard. Site waterlogged and unworkable due to the level of the yard being below surrounding sites – The whole site needed to be raised circa 500mm. Selected Clay material mixed with recycled aggregates used to make up levels

#### PROJECT CHALLENGES

Our team were challenged by the levels of the yard and surround sites.

The weather in Glasgow over Jan 21 was also a challenge to get the job done to allow our client access to the yard.

## Ground Stabilisation CASE STUDY

#### ENGINEERING AND SOLUTIONS TO OVERCOME THE CHALLENGES

To overcome the project challenges, set by the client, our team:

- Worked with the client and advised on the findings of the existing Site Investigation Information as to the best and quickest solution for a stabilised site.
- We carried out a site assessment to enable our client to best work with our stabilising crew and achieve the outcome required.
- Our site team then set to work to Modify the host material for making up the levels. 300mm with cement to form a Capping Replacement Layer.

#### The works had a two-fold advantage to this site.

- Utilised waste material destined for off-site disposal to create the sub-base for the Surface layer and make up levels.
- Added Cement to the Type1 layer to create a CBM (cement bound material) that
  offers a robust and hard-wearing surface for recycling operations.
